

Session 2

Using Simulation and Technology to Address Nursing Care for the Trans and Gender Non-Conforming Patient: Bringing OUT the Knowledge, Skills and Attitudes of Associate Degree Nursing Students

Kathy Awkard is part of a skilled team of professionals who work in the Nursing Skills Simulation Lab at Montgomery College. Creating engaging and realistic experiences in the form of simulations that students might encounter in clinical practice is a highlight of my job. Adding cultural considerations to those simulations help to generate realism. My interest lies in helping nursing students appreciate that recognizing and addressing cultural issues in the care that they provide is a patient safety matter. Community health and community service are of paramount importance to me, and I endeavor to use these vehicles to support our nursing student success.
